ASX AND MEDIA RELEASE

Quarterly Throughput Increased at Endeavor Mine

CBH's flagship Endeavor Mine achieved full rated throughput capacity (1.2 million tons per annum) for the 3 month period to 31 December 2007 with a 17% increase in ore processed compared to the previous quarter. Details of production for the Quarter are given in the table below.

Ore production for the quarter continued to be dominantly sourced from the bottom development level of the mine as planned, however a number of secondary stopes were brought on line in the central section of the mine as backfilling and mine development progressed. The focus for ore production is shifting from primary stopes in the bottom level where the ore is harder and grades lower to secondary stopes in the centre section where the majority of the mine's Ore Reserves are located. Production from the central mine area is expected to provide 70% of the mill feed in the March 2008 quarter.

Ore mined for the month of December was a record 118,600 tonnes with 30,000 tonnes currently on the surface stockpile.

Access to multiple high grade stopes in the central part of the mine is being achieved through the paste backfill operation. Pastefill for the first two quarters has been 102% of budget. This process is being accelerated through the introduction from the beginning of 2008 of a second backfill system that places cemented fill from the surface directly into mine voids via drill holes.

Ore grades for the December 2007 quarter were slightly lower than for the previous quarter but are expected to improve in the coming quarter.

Zinc metal output was up 6.8% compared to the previous quarter while lead metal output was down by 5.1%.

Production Results	Jun 2007 Quarter	Sep 2007 Quarter	Dec 2007 Quarter
Ore Treated (tonne)	235,800**	254,900	297,600***
Zinc %	5.1	5.3	5.2
Lead %	2.5	2.9	2.5
Silver g/t	35	43	77
Zinc Concentrates (dry tonne)	20,800	23,100	24,600
Contained zinc (tonne)	10,400	11,600	12,400
Recovery %	87.2	86.0	80.7
Lead Concentrate (dry tonne)	9,500	11,600	11,500
Contained lead (tonne)	4,600	5,800	5,500
Recovery %	78.3	79.0	72.4
Contained silver (kg)*	3,800	4,700	10,200

* Pursuant to agreements with CDE Australia Pty Ltd ("CDE"), revenue from sales of silver derived from the Endeavor Mine accrues to CDE

** Includes 7,400 tonnes of Broken Hill ore treated

*** Includes 7,200 tonnes of Broken Hill ore treated

Further details for the Endeavor Mine will be contained in the Company's full Quarterly Report of Activities to 31 December 2007 to be released later this month.

About CBH Resources Limited

CBH Resources is a base metal producer from the Endeavor Mine and has 2 new mines in the development stage, the Panorama open cut copper-zinc project in the Pilbara, W.A. and the Rasp underground zinc-lead-silver mine at Broken Hill.

The Company is evaluating for production two gold-zinc-lead-copper deposits, the Mineral Hill and the Hera Deposit, both located to the south of the Endeavor Operation in NSW. In addition base metal deposits are in advanced exploration along strike at Panorama and within the limestone hosted zinc-lead-silver province of the Kimberley District in W.A.
